Abstract

The objectives of this research to be achieved is to know whether there is a relationship between traditional games and character building at student Junior High School at Lab School UPI Bandung. The ultimate aim of physical education instructional is personality development as a whole, such as physical, mental, emotional, social, as well as spiritual aspects. These aspects were systematically, through physical activity participation based on health and social norms (value, behavior, play fair, etc).

The method used in this research is descriptive method with correlational techniques. The population were as many as 351 students.

The results of analytical calculation of the correlation coefficient obtained a correlation between traditional games variables with the participation of learning in physical education and building of student character.
